Living Documents

IESG, Bangkok, TH -- 2018-11-07

3 Types of Living Docs

- YANG Models / semantic versioning:
multiple versions before work completes

- Use cases, design team type docs:
written for internal type use
more archival, things we should remember

- "Living documents"
designed for external consumption
mainly "advice" type documents where the best
practices change over time
This is the one we are talking about here.

GROW Champion

- More stable than an ID, less heavyweight than RFC

- Somewhat like a BCP
  The 'C' is for Current. :-P

- Routing Security (secure BGP policy)
  Advice to operators
  This changes over time
  Currently in many places, blogs, websites, etc.

Experiment

- Write document in GROW
  - WGLC
  - IETF LC
  - IESG review?!
- RFC Editor cuts new document type – "Living Document"
  - Updates are owned by WG
  - WGLC.
  - Maybe AD approval
- Clear statement that this is "Living"
  - Don't implement
  - Periodic review
